

M - Probability

<p>What is the Bayes' Theorem for conditional probability?</p>	$P(A B) = \frac{P(A \cap B)}{P(B)}$ <p><i>In other words, P (one event occurs another occurred) = P (both occurred) / P (given one occurred) OR the probability of one event occurring given another has already occurred.</i></p>
<p>How can you check if event A depends on event B?</p>	<p>If dependent:</p> $P(A B) \neq P(A)$ <p>As given B has occurred, then the probability of A changes.</p> <p>Otherwise, if independent:</p> $P(A B) = P(A)$ <p>As B occurring doesn't affect the probability of A occurring,</p>
<p>Give an example of a dependent event</p>	<p>Picking sweets out of a bag without replacement.</p>
<p>What product-based formula holds true if event A and event B are independent? Why?</p>	$P(A \cap B) = P(A) \cdot P(B)$ <p>This is because...</p> $P(A) = P(A B) = \frac{P(A \cap B)}{P(B)}$ <p>As they're independent. Finally, you can rearrange.</p>
<p>What are mutually exclusive events? (with example and formula)</p>	<p>Events that cannot occur at the same time. E.g.,</p> <div data-bbox="802 1549 1205 1751" data-label="Diagram"> <p>A Venn diagram consisting of a rectangular frame containing two separate, non-overlapping circles. The left circle is light red and labeled 'A'. The right circle is light yellow and labeled 'B'. The circles do not touch or overlap, illustrating that events A and B are mutually exclusive.</p> </div> <p>Or flipping a coin TWICE, you cannot have HH and TT at the same time meaning these events are also mutually exclusive. This can be given by:</p>

	$P(A \cap B) = 0$
What is the probability of event A OR event B?	$P(A \cup B) = P(A) + P(B) - P(A \cap B)$ <p>For mutually exclusive, $P(A \cap B) = 0$.</p>
What are exhaustive events? (with example)	$P(A \cup B) = 1$ <p>When rolling a six-sided die, the events 1, 2, 3, 4, 5, and 6 are collectively exhaustive, because they encompass the entire range of possible outcomes</p>
What are complementary events? (with example)	<p>Two outcomes of an event that are the only two possible outcomes. E.g., heads and tails of a coin.</p> <p><i>This is a type of mutually exclusive events.</i></p>
